On the 27th she resumed full diet, and left the hospital on the 42nd day. This case illustrates the general conclusion to be derived from the whole of the foregoing cases, viz. that if it be conceded that aconite ameliorates the febrile condition, it does not much control it; and it further shows that it cannot in any degree anticipate or cut short the pyrexial stage in a disease against which, if it did possess the antifebrifuge properties ascribed to it, its influence ought to be most marked. I have said nothing respecting the action of aconite on the secretions, for I have but little evidence The frothy mucus (improperly called saliva) which appears in the mouth as one of the earliest symptoms...

Reviews

Extensive information for book fans. It is written in basic words and never hard to understand. It is extremely difficult to leave it before concluding, once you begin to read the book.
