

# Photo-Electricity The Liberation of Electrons by Light, with Chapters on Fluorescence Phosphorescence, and Photo-Chemical Actions Photography

Filesize: 5.05 MB

## ***Reviews***

*A top quality publication along with the font used was intriguing to read. I really could comprehend everything using this written e book. Its been designed in an remarkably straightforward way and it is only after i finished reading through this publication by which basically altered me, modify the way i believe.*

*(Cathrine Larkin Sr.)*

## PHOTO-ELECTRICITY THE LIBERATION OF ELECTRONS BY LIGHT, WITH CHAPTERS ON FLUORESCENCE PHOSPHORESCENCE, AND PHOTO-CHEMICAL ACTIONS PHOTOGRAPHY

To read **Photo-Electricity The Liberation of Electrons by Light, with Chapters on Fluorescence Phosphorescence, and Photo-Chemical Actions Photography** eBook, make sure you refer to the button under and download the ebook or get access to additional information which are have conjunction with PHOTO-ELECTRICITY THE LIBERATION OF ELECTRONS BY LIGHT, WITH CHAPTERS ON FLUORESCENCE PHOSPHORESCENCE, AND PHOTO-CHEMICAL ACTIONS PHOTOGRAPHY book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 66 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1913 Excerpt: . . . the cell. By charging the platinum wire connected to the sodium to a (negative) potential of about 3 volts (the contact potential difference between sodium and platinum) this effect could be eliminated, and the current obtained was due to the light alone. The results of the first experiments are given in the table. They show that the photo-electric current from a sodium surface at zero potential is proportional to the light intensity for ranges of intensities from (approximately) 0. 007 c-i-to 0. 5 c. f. Richtmyer, Physical Review, 29, pp. 71-80, 404-408, 1909. H In a second investigation the observations are extended over a much larger range of light intensities. The current from the cell with a 12-volt battery was measured with a sensitive dArsonval galvanometer. The effects due to contact E. M. F. were far too small to interfere with these experiments. The source of light was an arc between solid carbons. For ten or fifteen seconds after lighting, the arc was found to be fairly steady, especially when the arc length was increased just beyond the hissing point. The intensity was varied by altering the distance of the arc from the cell. Up to the highest intensities employed (about 600 candle-feet) the photo-electric current was found to be directly proportional to the intensity of illumination. From these results we should conclude that the law of proportionality holds over an extremely wide range of light intensities, though some recent experiments by H. Dember indicate a...
